

Kishan Rajdev

Full-Stack Engineer

+1 (334) 434-6911 | kishanrajdev@outlook.com | kishanrajdev.github.io

Technical Skills

- **Languages:** Java, Python, JavaScript, TypeScript
- **AI/Machine Learning:** PyTorch, Torchvision, NumPy, Pandas, Scikit-learn, Matplotlib
- **Frontend Technologies:** React, Redux, Sass, CSS, Storybook, Angular
- **Backend Technologies:** Node.js (Express.js, Nest), Java (Spring Boot), RabbitMQ, SQS
- **Databases:** MySQL, MongoDB, Redis
- **Testing Technologies:** JUnit, Mockito, JMeter, Jest, Enzyme, WebdriverIO
- **DevOps:** Docker, Kubernetes, Jenkins, GitOps, Terraform, Datadog
- **Cloud services:** AWS, Azure

Education

Master's in Computer Science (AI), 2025 (Pursuing) - 4.0 GPA
Troy University, Alabama, USA

Research Experience

AAKG-RAG: Aspect-Aware Knowledge Graph Retrieval for Product Question Answering From User Reviews

- Proposed a two-stage aspect-aware knowledge graph retrieval framework that structures product reviews into an aspect-centric knowledge graph and combines sentiment-aware retrieval with MMR reranking to improve review-based question answering.
- Accepted at the IEEE International Conference on Knowledge Graph (ICKG 2026).

The Computational Efficiency-Performance Trade-Off in Ensemble Methods for Image Classification

- Implemented and evaluated non-Bayesian ensemble methods, including Deep Ensembles, Snapshot Ensembles, Fast Geometric Ensembling, and Noisy Deep Ensembles, using PyTorch and ResNet-20.
- Analysed the impact of ensemble diversity on robustness under distribution shift across CIFAR-10, CIFAR-10-C, and iSUN datasets.
- Accepted at Image Processing and Vision Engineering (IMPROVE) 2026.

Diversity-Enhanced Snapshot Ensembles

- Proposed a lightweight extension to Snapshot Ensembles that improves robustness by selecting diverse snapshots based on cosine similarity in parameter space and prediction disagreement in function space.
- Short paper published at ACM Southeast 2026 (<https://doi.org/10.1145/3746467.3801503>).

Uncertainty-Aware Skin Cancer Classification with Deep Ensembles

- Evaluated Deep Ensembles for seven-class skin lesion classification using the ISIC dataset, demonstrating improved diagnostic accuracy and well-calibrated uncertainty estimates for risk-sensitive medical applications.
- Poster published at ACM Southeast 2026 (<https://doi.org/10.1145/3746467.3801505>).

Show Me the Money: Factors Contributing College Football NIL Valuations

- Contributed to an interdisciplinary research project, performed data preprocessing and ANCOVA to analyse factors influencing collegiate football NIL valuations.
- Published in *Sport Marketing Quarterly* (<https://doi.org/10.1177/1061693426145916>).

Industry Experience

SIEMENS LTD — ADVANCED SOFTWARE ENGINEER

SEP 2022 – JAN 2025

- Contributed to the development of the Additive Manufacturing Network, an end-to-end order-to-delivery collaboration platform for the industrial additive manufacturing industry.
- Designed and developed micro-services in a distributed system architecture.
- Maintained over 80% unit test coverage across services to ensure code reliability and maintainability.
- Led code reviews.
- Integrated SonarQube and established Quality Gates for continuous static code analysis and quality assurance.
- Analysed and optimised cloud service utilisation, reducing infrastructure costs by approximately 40%.
- Designed and tested disaster recovery procedures, including failover simulations and RTO/RPO analysis to improve system resiliency and business continuity.
- Integrated Datadog and PagerDuty for monitoring, alerting, and incident management.
- *Tech Stack: Java (Spring Boot), JUnit, JMeter, Node.js, TypeScript, React, Angular, Jest, AWS.*

J P MORGAN CHASE — FULL STACK ENGINEER

DEC 2021 – AUG 2022

- Developed and maintained Angular-based plugins for JPMC's Aurora platform, extending internal analytics capabilities and workflow automation features.
- *Tech stack: Java (Spring Boot), TypeScript, Angular, Node.js (Nest), PostgreSQL.*

M&G PLC — FULL STACK ENGINEER

APR 2019 – NOV 2021

- Worked on the development of M&G's customer portal, myaccount.mandg.com which provides users with a platform to manage their investment portfolios.
- Developed microservices and REST APIs for M&G's customer investment platform.
- Implemented TDD and maintained code coverage above 80%.
- Created and maintained reusable components and documented them using Storybook.
- *Tech stack: Java (Spring Boot), JMeter, Node.js, TypeScript, React, Jest, AWS.*

ZENSAR TECHNOLOGIES — SOFTWARE ENGINEER

MAY 2017 – MAR 2019

- Worked on the development of an e-commerce website of Woolworths ([woolworths.co.za](https://www.woolworths.co.za)).
- *Tech stack: Node.js, Express, React, Redux, Grunt, Knockout, Oracle ATG.*

WINGIFY PVT LTD — SOFTWARE ENGINEER

DEC 2015 – MAY 2017

- Contributed to the development of Pushcrew (by VWO), a SaaS push notification product.
- *Tech stack: Node.js, React, Webdriver.io, Wit.ai.*

PEPPERFRY.COM — SOFTWARE ENGINEER

JAN 2015 – DEC 2015

- Pepperfry is an Indian online marketplace for furniture and home decor. Contributed to the development of their web application and REST APIs for a mobile application.

Personal Projects

ROOSTER (CHROME WEB STORE)

Rooster is a Chrome Extension that helps you enhance productivity by providing insights into your browsing habits and alerting you when you get distracted. With over 2,000 downloads on the Chrome Web Store, Rooster helps users stay focused and manage their time effectively. (*Not actively maintained.*)
